SKC

A Name That Stands for 50 Years of Quality Sampling Equipment and Media

Since 1962, SKC has manufactured quality air sampling equipment and media for occupational and environmental health and safety professionals worldwide. SKC quality products include:

- Sample pumps
- Sorbent tubes
- Sample bags
- Passive samplers
- Size-selective samplers
- Filters

SKC Sample Bags

SKC, the world leader in sampling technologies, produced its first sample bag in the late 1970s. The bag was made of Tedlar® film and soon became the classic sample bag for VOCs. Over the last 30 years, SKC Tedlar bags have been the number one choice of professionals. SKC also introduced new high-performance materials — SamplePro® FlexFilm, and FlexFoil® — the next generation of sample bags. These materials provide new standards of performance for storage stability and background in bag sampling applications.

A Word About Fittings

SKC sample bag fittings are not "off-the-shelf" industrial fittings but are designed specifically for air sampling. SKC quality fittings are offered in a choice of materials including stainless steel, polypropylene, or PTFE that efficiently combine the hose/valve and septum into one lightweight fitting. Dual stainless steel fittings are also available.

SKC Bag Materials and Construction

SKC manufactures its sample bags out of clean top-grade films including SamplePro FlexFilm (SKC proprietary film), FlexFoil, Tedlar, and FluoroFilm FEP. Seams are strong, evenly sealed, and leak tested.

SKC Bag Availability & Price

SKC offers the largest selection of bag materials and sizes.

SKC — The Future in Sample Bags

SKC has been manufacturing quality sample bags for over 30 years and continues to actively research sample bag materials and applications to ensure that the bag you need is available when you need it. OH professionals rely on SKC.

Target the Right Bag Material for Your Application

Tedlar

- Made of classic DuPont Tedlar film for sample integrity and valid data
- Resists gas permeation both into and out of the bag
- Classic bag for VOCs referenced in many EPA methods
- Good stability for some sulphur compounds, including hydrogen sulphide

Pages 4-5

SamplePro FlexFilm

- Low VOC background
- Good stability for a wide variety of VOCs
- Good stability for CO, CO₂, methane, and SF₆
- Acceptable stability for some sulphur compounds (see table on page 6)
- Economically priced

A high background of hydrogen sulphide and carbonyl sulphide make SamplePro FlexFilm unsuitable for sampling these specific compounds. FlexFilm bags should not be rolled or creased during transport and storage. Store bags flat to avoid damage to FlexFilm material.

Pages 6-7

FlexFoil PLUS

- All the benefits of Standard FlexFoil — PLUS detection and good storage stability for low ppm to high ppb level VOCs
- Specially cleaned for low VOC and sulphur background

Pages 8-9

Standard FlexFoil

- The only bag that effectively holds hydrogen sulphide for 48 hours!
- Good stability for low molecular weight compounds such as CO, CO₂, methane, hydrogen, and SF₆
- Good 48-hour stability for hydrogen sulphide, hydrogen, carbonyl sulphide, and methyl and ethyl mercaptan
- Light- and moisture-proof

Moderate to high VOC background

Page 10

FluoroFilm FEP

- Very low VOC and sulphur background
- Inert and mechanically strong

FluoroFilm FEP exhibits poor storage stability for most VOCs and sulphur compounds. Analysis within 24 hours or less is necessary for many compounds.

Page 11

Tedlar Air Sample Bags

Referenced in Many EPA Methods

Performance Profile

Background

Moderately low VOC

Stability

Good for VOCs and some sulphur compounds
Good for CO, CO₂, methane, and SF₆

Thickness

2 mil

Sample Pump

Universal Pump or Twin Port Pocket Pump, see p. 15

Analysis

Multiple

SKC Tedlar bags made of classic DuPont Tedlar film are an industry standard. The popular SKC all-in-one polypropylene fitting makes bags lighter weight and easier to handle. SKC also offers Tedlar bags with dual stainless steel fittings.

- **Quality DuPont Tedlar film for sample integrity and valid data**
- **Good stability for VOCs and some sulphur compounds**
- **Good stability for carbon monoxide, carbon dioxide, methane, and sulphur hexafluoride**
- **Choice of fittings**
 - 1) Single combined polypropylene hose/valve and septum for economy and light weight
 - 2) Dual stainless steel for sampling flexibility
- **Available in a variety of sizes**
- **Bag available for EPA TCLP method**
- **Custom bags available**

VOCs

SF₆

Select from all-in-one polypropylene fitting or dual stainless steel fittings.

For bag sampling pumps, see page 15.

Stability of VOCs in Tedlar Bags

Acceptability criteria: ≥ 80% recovery at ≥ 2 days based on EPA Method 0040 as tested in SKC Laboratories

Compound	% Recovery	
	Day 1	Day 2
Acetone	99.0	95.0
Acetonitrile	74.0	66.0
Acrylonitrile	90.0	80.0

Tech Tips

Q: Can Tedlar Bags be used at elevated temperatures?

A: SKC Tedlar film has a melting point of 374°F (190°C). However, the bag fitting dictates the maximum operating temperature of the sample bag.

Tedlar bags with stainless steel fittings have a maximum operating temperature of 225°F (107.2°C) based on the temperature tolerances of this fitting's O-rings.

Tedlar bags with polypropylene fittings have a maximum operating temperature of 200°F (93.3°C) based on the temperature tolerance of the fitting material. Strain on the fitting should be avoided at the maximum temperature.

SamplePro FlexFilm Air Sample Bags

Economical Alternative for VOCs

Select from all-in-one polypropylene fitting or dual stainless steel fittings.

Performance Profile

Background

Low VOC (lower total VOC than Tedlar)

Stability

Good for VOC, CO, CO₂, methane, and SF₆
Acceptable for some sulphur compounds

Thickness

3 mil

Sample Pump

Universal Pump or Twin Port Pocket Pump, see p.15
Also see the Vac-U-Chamber on p.14

SKC SamplePro FlexFilm bags are constructed of 3-mil SKC proprietary material ideally suited for collecting air samples of VOCs. Manufactured exclusively for SKC, FlexFilm features lower total VOC background than Tedlar and shows the same sample stability for VOCs as seen with Tedlar. When combined with SKC quality fittings, the result is an economical sample bag with lower background levels and superior storage stability for collected compounds.

- Cost effective alternative to Tedlar for performance
- Lower total VOC background than Tedlar
- Superior storage stability for organic vapors
See 2-day storage stability data below
- Minimal adsorption
- Choice of fittings
 - 1) Single combined polypropylene hose/valve and septum for economy and light weight
 - 2) Dual stainless steel for sampling flexibility
- Stocked in a variety of sizes
- Custom bags available

VOCs

CO₂

‡ Blank corrected

SamplePro FlexFilm as alternative to Tedlar

An AIHce 2010 poster showed SKC SamplePro FlexFilm bags to be an ideal alternative to Tedlar.

- Fourteen compounds tested in FlexFilm showed recoveries of > 80% after two days of ambient storage; the same compounds showed very similar results in Tedlar (see page 4).
- A side-by-side Tedlar and FlexFilm background study showed FlexFilm has three times lower VOC background than Tedlar.
- FlexFilm exhibits higher levels of hydrogen sulphide and carbonyl sulphide background than Tedlar.

The Unique Properties of SamplePro FlexFilm

Water Vapour Transmission:	13.5 g/m ² x d
Oxygen Permeability:	52.5 cc/m ² x d
Carbon Dioxide Permeability:	171 cc/m ² x dv
Material Thickness:	3 mil
Temperature Resistance:	140°F (60°C)

Tech Tips

- Bags are designed for single use only.
- Do not use FlexFilm bags at temperatures above 140°F (60°C).
- In addition to bag material temperature tolerance, maximum bag operating temperature can also depend on O-ring or fitting temperature tolerances. Check individual bag operating instructions for maximum operating temperature. See page 11 for related Tech Tip.
- Store bags flat. Do not roll or crease bags during storage.
- Do not ship bags by air unless the cargo cabin is pressurised. Check appropriate regulations.
- Do not fill bags > 80%.

FlexFoil PLUS Gas Sample Bags

Specially Cleaned for Low ppm to High ppb Level VOCs

Select from all-in-one polypropylene or stainless steel fitting or breath gas fitting.

Performance Profile

Background

Low VOC and sulphur (specially cleaned)

Stability

Good for low ppm to high ppb level VOCs
Good for CO, CO₂, methane, hydrogen, and SF₆. Good 48-hour stability for hydrogen sulphide, hydrogen, carbonyl sulphide, and methyl and ethyl mercaptan

Thickness

4 ply (5 mil)

Sample Pump

Universal Pump or Twin Port Pocket Pump, see p.15 Also see the Vac-U-Chamber on p.14

For bag sampling pumps, see page 15.

- All the benefits of standard FlexFoil — PLUS detection and good storage stability for low ppm to high ppb level VOCs
- Low VOC and sulphur backgrounds
- Good stability for low molecular weight compounds such as CO, CO₂, methane, hydrogen, and SF₆
- Good 48-hour stability for hydrogen sulphide, carbonyl sulphide, and methyl and ethyl mercaptan
- Strong, flexible, evenly sealed 4-ply (5-mil) material
- Light and moisture-proof - Excellent for light-sensitive compounds
- Choice of all-in-one polypropylene or stainless steel hose/valve and septum fittings
- Stocked in a variety of sizes; custom bags available

About

FlexFoil Bag Applications

- Biogas and landfill gas (LFG) sampling
- CO₂ - OSHA Method ID-172
- CO₂ - NIOSH 6603
- CO - OSHA ID-210#
- Sulphur compounds
- VOCs* (FlexFoil PLUS only)
- Pollution level monitoring
- Site sampling/mobile surveys
- Breath analysis* (FlexFoil PLUS only)
- Calibration gas transfer
- Calibration mixtures
- Leak/spill exposure assessment
- Indoor air studies (CO, CO₂, SF₆)

Method specifies 5-layer foil bags. SKC 4-ply FlexFoil PLUS bags hold 100 ppm CO for 5 days without loss.

* Use FlexFoil PLUS sample bags when sampling VOCs. FlexFoil PLUS is specially cleaned for low-level (ppb) VOC detection and ideal for breath-gas analysis.

Select a Fitting

SKC sample bags are stocked with a choice of fittings to meet your applications. SKC bag fittings are not "off-the-shelf" industrial fittings but are designed specifically for air sampling. Choose from SKC quality fittings including dual stainless steel or all-in-one single polypropylene, stainless steel, or PTFE fittings that combine the hose/valve and septum into one lightweight fitting.

SKC Bag Stability Report –
<http://www.skcltd.com/index.php/knowledge-library/reports-and-studies>.

SKC Standard FlexFoil sample bags are the economical choice for sampling sulphur compounds and low molecular weight gases. The strong, evenly-sealed 4-ply (5-mil) material even retains hydrogen sulphide for 48 hours! SKC's quality all-in-one hose/valve and septum fitting design is available in polypropylene or stainless steel for Standard FlexFoil sample bags.

- Effectively retains hydrogen sulphide for 48 hours!
- Good stability for low molecular weight compounds such as CO, CO₂, methane, hydrogen, and SF₆
- Good 48-hour stability for hydrogen sulphide, carbonyl sulphide, and methyl and ethyl mercaptan
- Strong, flexible, evenly sealed 4-ply (5-mil) material
- Light and moisture-proof - Excellent for light-sensitive compounds
- Choice of all-in-one polypropylene or stainless steel hose/valve and septum fittings
- Stocked in a variety of sizes; custom bags available

FluoroFilm FEP Air Sample Bags

For Low-level Sampling with Analysis in < 1 Day

Select from all-in-one PTFE or stainless steel fitting.

Performance Profile

Background

Very low VOC and low sulphur

Stability

Good up to 24 hours for some VOCs and low molecular weight gases

Thickness

2 mil

Sample Pump

Universal Pump or Twin Port Pocket Pump, see p. 15

FluoroFilm FEP (fluorinated ethylene propylene) is the most chemically inert of all bag materials.

- Very low VOC and sulphur background
- Choice of all-in-one PTFE or stainless steel hose/valve and septum fittings
- Mechanically strong 2-mil FEP — resists impact and tearing
- Custom bags available

VOCs

Tech Tips

- Use only PTFE tubing for bag sampling to prevent sample loss through adsorption to the tubing's inner surface. See page 13 for tubing
- Sample bag maximum operating temperature can be dictated by the temperature tolerances of the bag material, fitting material, and/or fitting components such as O-rings.
 - **SKC single stainless steel, dual stainless steel, and PTFE fittings:** maximum temperature is 225°F (107.2°C) due to the fitting O-ring.
 - **SKC single polypropylene fitting:** Maximum temperature is 200°F (93.3°C) due to the fitting material.
 - **SKC FlexFilm sample bags:** Maximum temperature is 140°F (60°C) due to the bag material.
- The chemical properties of FluoroFilm FEP bags necessitate rapid analysis for reliable results.

Storage Stability of Collected Compounds in FluoroFilm FEP Bags

Acceptability criteria: ≥ 80% recovery at ≥ 2 days based on EPA Method 0040 as tested in SKC Laboratories

Compound	% Recovery	
	Day 1	Day 2
Acetone	89.0	85.0
Acetonitrile	65.0	42.0
Acrylonitrile	77.0	59.0
Allyl chloride	92.0	89.0
Ammonia	59.0	28.0
Benzene	93.0	79.0
Bromoethane	88.0	86.0
1,3-Butadiene	84.0	73.0
Butane	91.0	96.0
Butyl acetate	72.0	66.0
n-Butyl mercaptan	74.5	60.2
tert-Butyl mercaptan	86.0	78.0
Carbon dioxide	90.0	50.0
Carbon disulphide	58.3*	35.6*
Carbon monoxide	90.0	50.0
Carbon tetrachloride	95.0	91.0
Carbonyl sulphide	82.9*	71.2*
Chloroform	96.0	93.0
1,2-Dichloroethane	89.0	79.0
Dichloropropane	90.0	86.0
Diethyl disulphide	62.9	49.5
Diethyl sulphide	78.0	66.0
Dimethyl disulphide	74.0	62.0
Dimethyl sulphide	77.0	69.0
2,5-Dimethylthiophene	60.0	45.3
Ethyl acetate	94.0	94.0
Ethyl mercaptan	78.0	65.0
Ethyl methyl sulphide	77.0	68.0
Ethylene	99.0	94.0
2-Ethylthiophene	65.0	53.0
Heptane	88.0	87.0
Hexane	98.0	95.0
Hydrogen sulphide	72.2	47.8
Isobutyl mercaptan	83.0	67.0
Isooctane	97.0	96.0
Isopropyl alcohol	102.0	98.0
Isopropyl mercaptan	84.0	74.0
Methane	84.1	71.5
Methyl ethyl ketone (2-Butanone)	90.0	83.0
Methyl mercaptan	74.0	57.0
Methyl tert-butyl ether	99.0	97.0
Methylene chloride	84.0	77.0
3-Methylthiophene	67.0	53.0
Octane	91.0	84.0
Perchloroethylene	81.0	69.0
n-Propyl mercaptan	79.0	66.0
Propylene	97.0	91.0
Propylene oxide	94.0	89.0
Sulphur hexafluoride	96.4	92.8
Tetrahydrofuran	90.0	88.0
Tetrahydrothiophene	71.0	56.0
Thiophene	76.0	64.0
Toluene	81.0	74.0
1,1,1-Trichloroethane	100.0	97.0
Trichloroethylene	80.0	69.0
Vinylidene chloride	96.0	92.0
p-Xylene	76.0	65.0

FluoroFilm FEP Bags with Single Stainless Steel Fitting

Maximum Capacity (litre)	Part No.	Pack Size.	Fitting
0.5	243-02	5	
1	243-01	5	
3	243-03	5	
Replacement Septa	233-01-RS	10	

FluoroFilm FEP Bags with Single PTFE Fitting

Maximum Capacity (litre)	Part No.	Pack Size.	Fitting
0.5	240-02	5	
1	240-01	5	
3	240-03	5	
Replacement Septa	233-01-RS	10	

CUSTOM AIR SAMPLE BAGS MADE TO YOUR SPECIFICATIONS

Need a special bag size?

SKC provides single or multiple-cell sample bags in the size you need.

Need a specific combination of fitting and bag material?

SKC offers a wide choice of fittings and bag materials that can be combined to your specifications.

Fittings:

- Stainless Steel
- Polypropylene
- Nickel-plated brass
- PTFE
- PVC

Sample bag materials:

- SamplePro FlexFilm (3 mil)
- FluoroFilm FEP (2 mil)
- 4-ply FlexFoil – Standard or PLUS (5 mil)
- Tedlar (2 mil)

SKC custom sample bags are proven performers!

Indoor air

Biogas/landfill
gas sampling

Soil vapour

Beverage testing

Contact SKC today for your custom sample bags!

Vac-U-Tube

For Quick Bag Samples Without a Pump

The Vac-U-Tube acrylic syringe with removable face plate allows a specially designed 0.7-litre sample bag to be placed inside. The bag is attached to the face plate that is then secured to the syringe. Sample by pulling the plunger or purge by pushing the plunger. The Vac-U-Tube can be used for headspace soil gas sampling.

- No electronic pump required
- Setup takes less than 20 seconds
- Convenient for testing monitoring wells

Description	Part No.	Pack Size.
Vac-U-Tube includes Vac-U-Tube and carry case, requires either sample bag below (not included)	231-945	ea
Vac-U-Tube Bag , 0.7 litre Tedlar	232-945A	10
SamplePro FlexFilm	236-945A	10

PTFE Tubing

Inert Tubing for Bag Sampling

Chemically inert SKC PTFE tubing is ideal for bag sampling to prevent sample loss through adsorption to the tubing's inner surface. SKC offers PTFE tubing with different diameters to fit over or inside bag fittings.

- Heat and corrosion resistant
- Chemically inert
- Strong

PTFE Tubing	Part No.	Length
Fits over all SKC bag fittings and Twin Port Pocket Pump fittings 3/16-inch ID, 1/4-inch OD	231-9-23	3m
Fits inside bag fitting 1/16-inch ID, 1/8-inch OD	231-9-21	3m
Fits Vac-U-Chamber sample inlet and pump fittings 1/4-inch ID, 5/16-inch OD	231-937 231-924	3m 15m
Twin Port Pocket Pump Tubing Adapter Kit Includes two lengths of silicone tubing: 1/8-inch ID, 1/4-inch OD for bag fitting and 3/16-inch ID, 3/8-inch OD for pump fitting; use with PTFE tubing (231-9-23 above)	231-926	

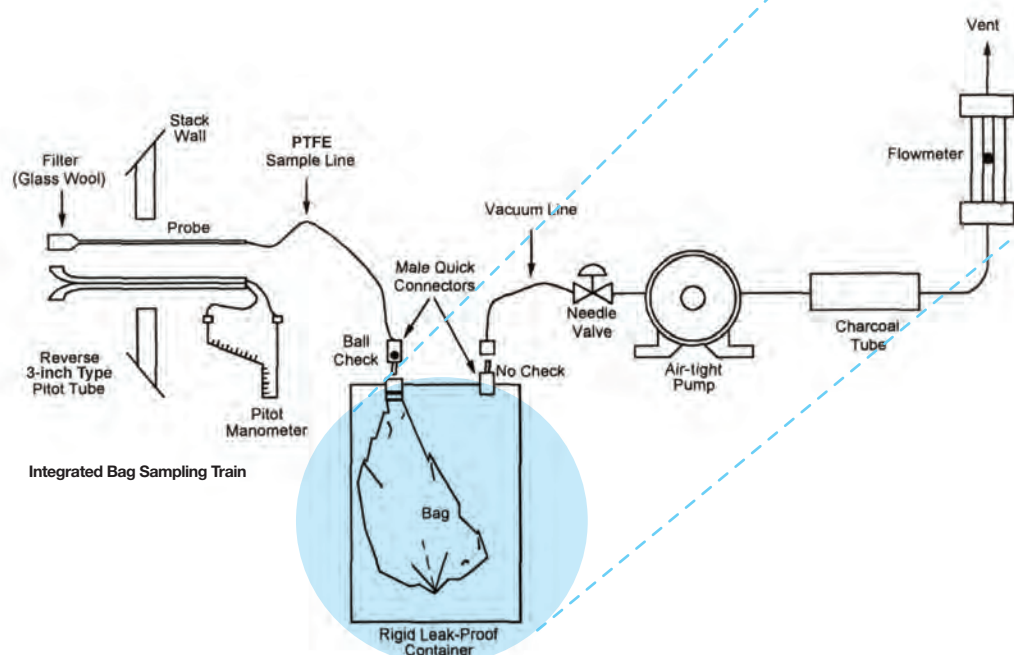

Tech Tips

- Use only PTFE tubing for bag sampling to prevent sample loss through adsorption to the tubing's inner surface.

Vac-U-Chamber

Negative Pressure Lung-style Sampler

- **Fills air sample bags directly**
Designed to contain SKC sample bags
- **Rugged and airtight**
Will not collapse under vacuum
- **Multiple sizes available**
Large for sample volumes up to 8 litres
Small for sample volumes up to 1 litre
Larger sizes available for EPA Method 0040
- **Protects from contamination**
Sample does not pass through the pump
Sample contacts only inert tubing and bag
- **Sample line extends from contaminant source through case to bag**

Applications

- Industrial VOCs
- Indoor air quality
- Effluent gas samples
- Soil gas/vapour sampling
- Groundwater testing
- Stack sampling
- Ventilation studies

Large Vac-U-Chamber

Description	Part No.
Complete Vac-U-Chamber Kit includes 224-PCMTX8 sample pump, single charger (223-203A) with cable, large Vac-U-Chamber, and 10 Tedlar sample bags (232-939)	224-4115MTX
Large Vac-U-Chamber only with stainless steel fittings (supplied without pump), suitable for use with SKC 8-litre sample bags below	231-939
8-litre Sample Bag with single polypropylene fitting, pk/10, for use with large Vac-U-Chamber (232-939)	232-939

Small Vac-U-Chamber

Description	Part No.
Complete Vac-U-Chamber Kit includes 224-PCMTX8 sample pump, single charger (223-203A), small Vac-U-Chamber, and 10 Tedlar sample bags (232-01)	224-4124MTX
Small Vac-U-Chamber only with polypropylene fittings (supplied without pump), suitable for use with 1-litre sample bags below	231-940
1-litre Sample Bag with single polypropylene fitting, pk/10, for use with small Vac-U-Chamber	232-01

Larger sizes are available; contact SKC on 01258 480188

Twin Port Pocket Pump - 20 to 225 ml/min

Programmable Sample Bag Pump

The twin port Pocket Pump® is ideal for bag sampling and other applications. Operate Pocket Pump from the simple 3-button integral keypad for quick grab samples. Or, program Pocket Pump from a PC using DataTrac® for Pocket Pump Software. Pocket Pump can be programmed for delayed start and timed runs.

- 12-hour run time with rechargeable NiMH battery
- Constant flows from 20 to 225 ml/min — suitable for other applications
- Simple 3-button operation or program with a PC using DataTrac software accessory
- Continuous sample volume calculations

Description	Part No.
Twin Port Pocket Pump* with NiMH battery pack, requires charger 223-229A 100-240V for tubing, see Part Nos. 231-9-23 and 231-926 on p. 13	210-1003MTX

* ATEX Listed.

Universal sample pump 5-4000ml/min

Alternative pump for filling bags

The SKC Universal pump is the alternative choice for filling sample bags. With a flow range of 5-4000ml/min and integrated flow indicator the Universal sample pump can be adjusted to suit the application. Simply attach the sample bag to the outlet port and turn on your pump. For tubing see page 13 (231-9-23)

- Rechargeable NiMH battery pack for convenience
- Easily adjustable flow rate
- Suitable for many environments and applications.

Description	Part No.
Universal ATEX approved Standard Pump 5-4000ml/min with NiMH battery pack operating manual and tool kit*	224-44MTX
Universal ATEX approved Intermediate Pump 5-4000ml/min with NiMH battery pack operating manual and tool kit*	224-PCMTX4
Universal ATEX approved Deluxe Pump 5-4000ml/min with NiMH battery pack operating manual and tool kit *	224-PCMTX8

* Requires charger (223-203A)
