# Chapter 1 | General Information

## User Manual

The instructions given in this manual must be read thoroughly before installation and start-up, particularly those concerning the points related to the safety of the end-user. This user manual must be made available to every person involved in the activation, use, maintenance, and repair of the unit. The information, technical data, and diagrams contained in this manual are based on the information that is available at a given time. In case of doubt, contact *Oldham* for additional information.

The aim of this manual is to supply simple and accurate information to the user. *Oldham* cannot be held liable for any misinterpretations in the reading of this manual. In spite of our efforts to produce an error-free manual, it may nonetheless contain some unintentional technical inaccuracies.

In the client's interest, *Oldham* reserves the right to modify the technical characteristics of its equipment to increase their performance without prior notice. The present instructions and their content are the inalienable property of *Oldham*.

## Symbols used

Icon	Significance
	This symbol indicates useful additional information.
	This symbol indicates: This equipment must be connected to ground.
	This symbol indicates: Protective earth terminal. A cable of the adequate diameter must be connected to ground and to the terminal having this symbol.

This symbol indicates:  
You must refer to the instructions.

This symbol indicates:  
**Warning! In the present mode of use, failure to adhere to the instructions preceded by this symbol can result in a risk of electric shock and/or death.**

European Union (and EEA) only. This symbol indicates that this product must not be discarded with household waste, as per the EEA directive (2002/96/EC) and your own national regulations.

This product must be disposed of at a collection point that is reserved for this purpose, for example, an official site for the collection of electrical and electronic equipment (EEE) in view of their recycling, or a point of exchange for authorized products that is accessible when you acquire a new product of the same type.

Any deviation as regards these recommendations for the disposal of this type of waste can have negative effects on the environment and public health, as these electric and electronic products generally contain substances that can be dangerous. Your full cooperation in the proper disposal of this product promotes a better use of natural resources.

---

## Safety instructions

Labels intended to remind you of the principal precautions of use have been placed on the unit in the form of pictograms. These labels are considered an integral part of the unit. If a label falls off or becomes illegible, please ensure it is replaced. The significance of the labels is detailed below.

---

The installation and electrical connections must be carried out by qualified personnel according to the instructions of the manufacturer and the standards of the competent authorities.

Failure to adhere to the instructions can have serious consequences on the safety of persons. Please be extremely rigorous as regards electricity and assembly (coupling, network connections).

---

## Important information

The modification of the material and the use of parts of an unspecified origin shall entail the cancellation of any form of warranty.

The use of the unit has been projected for the applications specified in the technical characteristics. Exceeding the indicated values cannot in any case be authorized.

## Liability limits

Neither *Oldham* nor any other associated company under any circumstances can be held liable for any damage, including, without limitations, damages for loss or interruption of manufacture, loss of information, defect of the *MX 43* control unit, injuries, loss of time, financial or material loss, or any direct or indirect consequence of loss occurring in the context of the use or impossibility of use of the product, even in the event that *Oldham* has been informed of such damage.

# Chapter 2 | Introduction

## General Information

CTX300 gas detectors are designed to measure toxic gases or vapors and oxygen. With robust materials, a specifically-adapted design, appropriate accessories, stainless bolts and a polyamide case (IP54), CTX 300 detectors are designed to withstand the roughest conditions.

Figure 1: overview of a CTX 300 with display (left) and without display (right).

## Composition

Sensor type	CTX 300		
	Toxic	Oxygen	Semi-conductor
Gases detected	Common toxic gases detected.	Oxygen.	- Combustible gas. - Solvents. - Some Freons.
Detection method	Electrochemical sensors (1).	Electrochemical sensor.	Semiconductor sensor.
Type of sensor pack	Pre-calibrated removable sensor pack (2).	Pre-calibrated removable sensor pack: 0-30% scale or 0-100% volume.	Removable sensor pack, not pre-calibrated.
Options	With display.	With display.	
Certification	None.	None	None

(1) Specific to each gas.

(2) Choice between several scales.

# Chapter 3 | Installation and connection

## Installing the detectors

### Layout

While the measuring sensor is always located on the underside of the detector, several factors determine where the detector should be located:

- If the gas being measured is lighter than the air, place the detector near the ceiling.
- If the gas is heavier than the air (CO<sub>2</sub> and Freons, for example) place the detector close to the floor.
- Near offtake points.
- Generally, in locations where gas may accumulate, taking into consideration both:
  - The effects of temperature;
  - The outside winds direction.

### Determining the best sensor location

Factors to consider when determining the best placement for the detector are:

- Potential sources for vapor and gas emissions.
- Characteristics of gases and vapors (density).
- Air circulation:
  - Inside: mechanical or natural ventilation.
  - Outside: wind direction and velocity.
- Effects of temperature.
- Local constraints (air flow, water splash, etc.).

Detectors should always be located in an easily accessible location for maintenance purposes.

Special accessories may be necessary to protect the equipment against any liquid projectiles, dust, direct sunlight or low temperatures in the area.

## Mechanical installation

Figure 2: overall dimensions of the CTX 300.

Figure 3: drilling diagram for wall mounting (view of the side flatten onto the ceiling).

**Figure 4: ceiling mounting with a brace. The fixing drawing is identical to this of the wall mount.**

Ref.	Qty	Description	Code	Material
1	1	Brace	6132380	Stainless
2	4	Washer A25 ACCD	6905518	Stainless
3	4	Screw CHC LI2	6902218	Stainless

## Electrical connections

### Wiring specifications

If needed, consult the grounding instructions for *Oldham* instruments and related connection materials in Annex 1.

### Connections for the various types of sensors

Wire	CTX 300 (TOX/OX) with display	CTX 300 (TOX/OX) without display	CTX 300 SC without display
Output signal	4-20 mA	4-20 mA	4-20 mA
Active wires	3	2	3
Cable entry	1 x 6-11 mm	1 x 6-11 mm	1 x 6-11 mm

### Connection of a 3-wire sensor to an Oldham control unit

Wire	Terminal number
(+) V DC power supply:	3
(-) V DC power supply (masse 0 V):	2
Output signal:	1

Figure 5: connection of a 3-wire sensor to an Oldham control unit.

### Connection of a 2-wire sensor to an Oldham control unit

Wire	Terminal number
(+) V DC power supply:	3
Output signal:	1

Both wires are the 4-20 mA 2-wire loop.

Figure 6: connection of a 2-wire sensor to an Oldham control unit.

**Connection of a 3-wire CTX300 sensor to a non-OLDHAM control unit with an internal power supply**

**Figure 7: Connection of a 3-wire CTX300 sensor to a non-OLDHAM control unit.**

- (R) Maximal load = 200 Ω.
- (A) Power supply  $15 \leq V_{cc} \leq 32$ .  
 $18 \leq V_{cc} \leq 30$  for CO<sub>2</sub> sensor.  
 $I_{max} = 130$  mA.

**Connection of a 2-wire 4-20mA sensor to a non-Oldham control unit and to an internal power supply**

**Figure 8: Connection of a 2-wire 4-20mA sensor to a non-Oldham control unit.**

- (A) Power supply  $15 < V_{CC} < 32V$ .  $I_{max} = 30$  mA.

## Operating mode

### CTX300 with display

- Remove the 4 screws (ref. 1).
- Remove the cover (ref. 2).

Figure 9

- Completely remove the screw (ref. 4).
- Unscrew the screw a few turns (ref. 3).

Figure 10

- Turn the display circuit as shown (ref. 5).
- Connect the cable (ref. 6) to the connector. Refer to paragraph *Connections for the various types of sensors* on page 13.
- Return the display circuit to its original position and replace the cover.

Figure 11

### CTX 300 without display

- Unscrew the 4 screws (ref. 1).
- Remove the cover (rep. 2).
- Proceed to wire the sensor according to the terminal location.

Figure 12

# Chapter 4 | Powering up and use

## Powering up

- The sensor turns on when connected to a power supply.
- If the sensor has a display, the green LED will be lit (ref. 2) and a value will appear on the display screen (ref. 1).

Figure 13

In case of a problem, verify that the maintenance switch (ref. 1), located on the main circuit, is in the *MES* (measure) position.

Figure 14: CTX 300 circuit board.

Figure 15: CTX 300 SC main circuit board.

## 4-20 mA analog output

For *CTX 300* sensors, the 4-20 mA output current is proportional to the gas level.

The various states of the 4-20 mA output are:

- $\leq 1$  mA to indicate a fault.
- = 2 mA in *Calibration* position, except for the CO<sub>2</sub> sensor that does not have a calibration function.
- Between 4 and 20 mA for measurement values.
- $\geq 20$  mA if levels exceed measurement range.

# Chapter 5 | Maintenance

The adjustment operations in this paragraph are reserved for authorized, trained personnel because they may compromise detection reliability.

Gas detectors are safety devices. OLDHAM recommends the regular testing of fixed gas detection installations. This type of test consists of injecting the calibration gas into the detector at a sufficient concentration to activate the pre-set alarms. It is to be understood that this test is in no way a replacement for a detector calibration.

The frequency of gas tests depends on the industrial application where the detector is in use. Frequent inspections should be made in the months following the commissioning of the installation, and should then become more widely spaced provided that no significant deviation is observed. If a detector should fail to react in contact with the gas, calibration is essential. The frequency of calibrations shall be appropriate according to the results of the tests (humidity, temperature, dust, etc.); however, it must not exceed one year.

The general manager should put safety procedures in place on-site. OLDHAM cannot be held responsible for their enforcement.

## Calibration Recommendations

Calibration consists of adjusting the zero of the clean air sensor and adjusting sensitivity with a test gas. Adjustments are made at the sensor level.

Equipment needed to calibrate the detector correctly:

- Flexible plastic tubing (Figure 16, ref. 2).
- Manometer and regulator valve for the compressed gas cylinders (ref. 3).
- 0 to 60 l/h flow meter (if the cylinder is not equipped with one).
- Calibration pipe (ref. 1), which may vary depending on the nature of the gas (see pages 31 and following).
- Test gas cylinder (ref. 4).

**Figure 16: sensor calibration assembly.**

Zero adjustment should be performed in a gas and vapor free area. If this is not possible, synthetic bottled air can be injected at a rate of 60 l/h.

Use a bottle of test gas to adjust sensor sensitivity (concentration close to the alarm threshold or corresponding to 30% of the measurement range at a minimum). The recommended rate is 60 l/h.

Note: when dealing with dangerous gases, you **MUST** consult a specialized *Oldham* technician or use another sensor pack recently pre-calibrated at a factory.

The detector should be calibrated using the intended flow-rate. The actual concentration of gas may be underestimated if the detector was calibrated with too high of a flow rate.

### **CTX 300 calibration**

#### **1<sup>st</sup> case: CTX 300 with display (excluding O<sub>2</sub>)**

- The sensor is operating: the green light (ref. 1) is lit and the display screen shows the measurement level.

**Figure 17**

- Flip the maintenance switch (ref. 1) into the **CAL** (calibration) position: the yellow light (Figure 17, ref. 2) will be lit and the sensor will send a 2 mA current to the control unit (*Maintenance mode*).
- Verify that the sensor is located in a clean-air environment. If not, inject synthetic air at a flow rate of 30 l/h.

Figure 18

- Wait for the measurement to stabilize (displayed on screen) and adjust the zero by using the **ZERO** potentiometer located on the sensor pack (ref. 2).
- Inject the recommended calibration gas at a flow rate of 30 l/h.
- Wait for the measurement to stabilize.
- Adjust the sensitivity by using the sensitivity potentiometer located on the sensor pack (rep. 1).

Figure 19

- Stop injecting the calibration gas.
- Remove the gas injection pipe, then wait and verify that the signal returns to zero. Repeat procedure if it does not.
- Flip the maintenance switch (rep. 1) into the **MES** (measure) position. The yellow light will turn off (Figure 17, rep. 2).
- Calibration is complete.

Figure 20

**2<sup>nd</sup> case: CTX 300 without display (except for O<sub>2</sub> et SC)**

- The sensor is operating.
- Flip the maintenance switch (ref. 1) into the *CAL* (calibration) position: the sensor will send a 2 mA current to the control unit (*Maintenance mode*).
- Verify that the sensor is located in a clean-air environment. Use the calibration kit and follow all recommendations.

**Figure 21**

- Connect a voltmeter to the AF+ and AF- terminals (caliber mV/DC).

**Figure 22**

- Wait for the signal to stabilize and adjust the zero by using the ZERO potentiometer located on the sensor pack (Figure 23, ref. 2). The output signal should be 0 mV.
- Now inject the recommended test gas at a flow rate of 30 l/h. Use the calibration kit and follow all recommendations.
- Wait until the signal has stabilized.
- Read the mV value on the voltmeter (Figure 22), with the full scale at 1600 mV. Calculate the value to be read as a function of your test gas.

**Figure 23**

- Adjust the displayed value using the potentiometer (Figure 23, rep.1).  
*Example*
  - CO sensor.
  - Scale 0-300 ppm.
  - Standard gas concentration: 100 ppm.
  - Reading: 533 mV.
- Shut off the calibration gas injection.
- Withdraw the gas injection pipe.
- Then wait and check that the scale has returned to zero. Otherwise, repeat the entire procedure.
- Switch the maintenance on/off switch to the *MES* (measure) position (ref. 1).

**Figure 24**

## CTX 300 calibration for O<sub>2</sub>

This sensor is an Oxygen type.

### 1<sup>st</sup> case: CTX 300 O<sub>2</sub> with display

- See paragraph 1<sup>st</sup> case: CTX 300 with display, on page 22. Proceed only with adjusting sensitivity (rep. 1) by injection of test gas.

Figure 25

### 2<sup>nd</sup> case: CTX 300 O<sub>2</sub> without display screen nor LED

- See paragraph 2<sup>nd</sup> case: CTX 300 without display on page 24. Proceed only with adjusting sensitivity (rep. 1) by injection of test gas.

Signal value mV:

- 1600 mV for full scale, means 30 % O<sub>2</sub>.
- 1115 mV for 20.9 % O<sub>2</sub>.
- 0 mV for 0% O<sub>2</sub>.

Figure 26

Note: the signal sent from the CTX300 (toxic or oxygen) sensor to the control unit can be measured on the main circuit by connecting a millivoltmeter to the pins designed for this purpose (Figure 27).

- 400 mV corresponds to 4 mA.
- 2000 mV corresponds to 20 mA.

Figure 27

## CTX 300 calibration (for Semiconductor)

This is a *Semiconductor* type sensor.

- Flip the switch (rep. 1) into the *CAL* position.

Figure 28

- Ensure that the sensor is in clean air, otherwise inject synthetic air into it using the calibration kit and referring to the recommendations below.  
*Important: to correctly calibrate a sensor equipped with a semiconductor cell, use of a humidifier kit (code 6335919) is MANDATORY.*

### Using the humidifier kit

- Lift the lid (ref. A) and, using a washbottle, moisten the filter, without saturating it, with distilled water
- Replace the lid and check that all parts are properly assembled and that the assembly is fully airtight.
- Adjust the flow rate to 60 l/h and wait 10 minutes until the humidifier is fully purged.
- Apply the gas introduction pipe (ref. C) to the nose of the sensor and wait at least five minutes for the measurement to stabilize.  
*Note: the sensor must be powered for at least two hours before any adjustment can be made.*

Figure 29: the humidifier kit.

- Connect a voltmeter as indicated and adjust, using potentiometer p5 (ref. 1). The output signal must be equal to 880 mV.
- Next, inject the calibration gas at a flow rate of 30 l/h (refer to paragraph *Indications for calibrating the CTX 300 SC*, on page 43).
- Wait for the signal to stabilize and adjust the signal with the sensitivity potentiometer p6 (ref. 2).

The output signal should be:

Figure 30

$$U = 880 \text{ mV} + \frac{3520 \text{ mV} \times \text{Cal gas concentration}}{\text{Sensor measurement range}}$$

Example

Sensor measure (% of full range)	Output signal (mV)
0	880
50	2 640
100	4 400

- Stop injecting the calibration gas.
- Verify that the reading returns to zero (880 mV). If it does not, repeat the entire procedure.
- Calibration is complete.
- Flip the switch (ref. 1) into the MES (Measure) position.

Figure 31

## Replacing a sensor

Sensors must be replaced:

- When calibration is no longer possible (no sensitivity);
- During preventative maintenance.

The replacement sensor should be identical to the original sensor (same gas, same range). After a sensor has been replaced, a calibration or test (for pre-calibrated sensors) must be conducted.

## Disposal

For the preservation, protection and improvement of environmental quality, and for the protection of human health and the prudent and rational utilization of natural resources, the *CTX 300* must be disposed of separately from electronic equipment and cannot be disposed of with normal household waste. The user therefore has an obligation to separate the *CTX 300* sensor from other waste to ensure that it is recycled safely for the environment. For further details on existing collection sites, contact the local administration or seller of the product.

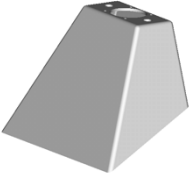

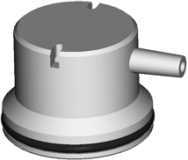

# Chapter 6 | Spare parts

List of spare parts for different detectors.

Replacement parts must imperatively be guaranteed origin *Oldham*. Otherwise, material safety could be jeopardized.

UE\_CTX 300\_revA

The company Oldham S.A. S., ZI Est, 62000 Arras France, declares that following materials intended for halogenated refrigerant fluid detection,

Gas detectors OLCT 10 & CTX 300

comply with the requirements of the European standard EN 14624 :

Performances of portable leak detectors or atmosphere controllers of halogenated refrigerant fluids.

Technical specifications

Equipment category : ..... Non selective atmosphere controller  
 Measuring range : ..... 0-2000 ppm R134a  
 Minimum sensitivity threshold : ..... 10 ppm R134a  
 Maximum sensitivity threshold : ..... 5000 ppm R134a during 90s without loss of sensitivity  
 Minimum alarm threshold : ..... 200 ppm R134a  
 Minimum time to detect the lowest concentration : ..... less than 25s after injection of 500 ppm R134a  
 Recovery time : ..... less than 160s after injection of 1000 ppm R134a during 8 minutes

Note 1 : For more information about installation, commissioning or safe practices please refer to the user manual of the manufacturer.

Note 2 : Local regulation may apply. For France, please refer to articles R.543-75 to R.543-123 in section 6 of the French Environmental Code (decree #2007-1467 dated from October 12, 2007 and decree #2011-396 dated from 2011, April 13).

# Chapter 8 Technical specifications

Enclosure.	Polycarbonate housing.
Function.	Detector-transmitter
Display	Highly visible backlight display unit (optional, gas dependent)
Indicator lights	In operation: green color (on CTX 300 : 3-wire) Failure / maintenance: yellow color
Link	2 wires shielded LiYCY Typ– CTX 300 without display unit 3 wires shielded LiYCY Typ – CTX 300 with display unit (or semiconductor versions)
Cable entry	PG9 cable gland (outer diameter 6 to 11 mm)
Power supply	15 to 32 V DC
Power consumption	CTX 300 without display unit: 27 mA CTX 300 with display unit: 110 mA semiconductor versions: 100mA
Operating temperature	-40°C to + 50°C, 40°F to + 122°F sensor dependent
Sealing	IP 54, NEMA 3 & 3R
Weight	520 g
Dimensions	130 x 136 x 69 (l x h x d) in mm ; (5.12" x 5.35" x 2.72")
Certification	 CCSA – Class 4812 10 – Signal Appliances-Detectors CSAUS – Class 4812 86 - Signal Appliances-Miscellaneous
EMC	Type 1 according to EN 50270:06
Impedance	32 ohms max loop for CTX 300 with display unit and for solid states and CO <sub>2</sub> sensor versions 128 ohms max loop for CTX 300 without display unit

Gas	Type of sensor	Range (ppm)	Operating temperature	Relative humidity uncondensed	Accuracy (at PA full scale)	Life span (in month)	T(50) (seconds)

SC : Semiconductor

# Chapter 9 | Annex

## Indications for calibrating the CTX 300 SC

This information relates to the CTX 300 semiconductor.

P/N	Gas types	Measurement range	After sale service standard gas	Test gas
6313545	Methyl Chloride CH <sub>3</sub> Cl	500 ppm	50 ppm CH <sub>3</sub> Cl	2000 ppm H <sub>2</sub> = 190 ppm ± 25ppm
	Methylene chloride CH <sub>2</sub> Cl <sub>2</sub>	500 ppm	100 ppm CH <sub>2</sub> Cl <sub>2</sub>	100 ppm CO = 80ppm ± 15 ppm
6313546	Trichloroethylene C <sub>2</sub> HCl <sub>3</sub>	500 ppm	75 ppm Trichloroethylene	300 ppm CO = 120 ppm ± 35ppm
	Toluene C <sub>6</sub> H <sub>5</sub> CH <sub>3</sub>	2 000 ppm	100 ppm Toluene	300 ppm CO = 330ppm ± 50ppm
	Xylene C <sub>6</sub> H <sub>4</sub> (CH <sub>3</sub> ) <sub>2</sub>	2 000 ppm	100 ppm Xylene	300 ppm CO = 330ppm ± 50ppm
	Ethanol C <sub>2</sub> H <sub>5</sub> OH	5 000 ppm	1000 ppm Ethanol	1000ppm H <sub>2</sub> = 880ppm ± 150ppm
6313547	Freon R12	1 % volume	1000 ppm R12	0.5%CH <sub>4</sub> =overscale
	Freon R22	2000 ppm	1000 ppm R22	0.5% CH <sub>4</sub> = 750ppm ± 200ppm
6313544	Freon R134A	2000 ppm	1000 ppm R134A	0.5% CH <sub>4</sub> = 2000ppm ± 500ppm
	Freon R11	1% volume	1000 ppm R134A = 150 ppm	0.5% CH <sub>4</sub> =overscale
	Freon R23	1% volume	1000 ppm R22 = 4500ppm	0.5% CH <sub>4</sub> = 2800ppm ±800ppm
