

Signature Series Connection

Featuring a heavier thread design, this connection simply enhanced the already trusted AMS threaded connection.

Features:

- Heavier thread design.
- Connection and disassembly with 1 1/2 turns.
- Fast connection speed without risk of galling.

Threaded Connection

Similar in form to a nuts and bolts system, the AMS threaded connection is reliable and simple to use. Available in two sizes: 1) a 5/8" thread for the majority of soil auger diameters, and 2) a 3/4" thread for soil augers with diameters of 6" and 7".

Features:

- Economical and secure.
- A versatile connection.

Quick Connect Connection

AMS Quick Connect offers a fast connect and disconnect attachment for all augers. The unique button and hex coupling connectors allow augers, cross handles and extensions to connect and disconnect faster than the AMS threaded connections.

The Quick Connect system is not designed to work with slide hammers, which are necessary for soil core sampler applications.

Features:

- Fast, positive push-to-lock and easy disconnect.
- Finger ring for AMS Quick Connect button depression included.
- Allows rotation in either direction.
- Available in cast carbon steel and stainless steel (SST).
Note: Fittings will always be carbon steel.
- Not designed for use with the AMS slide hammer.

AMS Quick Connect attachment system allows for fast and easy connection and disconnection.
