PRODUCT OVERVIEW

The TX8005 **AIR XD Dust Monitor** is designed to provide detailed, accurate, real-time data on airborne particulates so that users can take appropriate actions to stay safe and ensure personnel are fully protected from particulate-related health hazards.

The **AIR XD** allows users to simultaneously monitor multiple particulate matter (PM) sizes (PM1.0, PM2.5, PM4.25, PM10, as well as custom sizes) and can report on Total Suspended Particulates (TSP).

Precise data is collected for measurable particulates, enabling detailed size profiling and analysis using the application software.

The **AIR XD** uses an innovative Optical Particle Counter (OPC) that combines adaptive particle flowrate with advanced sensing technology to ensure a high level of measurement accuracy. The size of each particle is instantaneously measured and classified at up to 10,000 samples per second to allow detailed real-time reporting in high dust environments.

As the **AIR XD** records data on all particulates between 0.35 μm and +40 μm , users can easily access and view detailed information about a wide range of PM sizes.

Measurement information can be viewed via the instrument display or as live or historical readings using the **Breathe** application software.

DISPOSAL

Waste of Electrical and Electronic Equipment (WEEE) Directive (2012/19/EU)

The **AIR XD** operates a protective thermal cut-out sequence when the temperature inside the instrument exceeds the maximum operating temperature specification, detailed in **section 7**. This protective measure is in place to maintain the lifespan and operating functionality of the optical sensor assembly when the **AIR XD** is installed in environments with high ambient temperatures.
