Selective Radiation Meter SRM-3006

Selective measurement of high frequency electromagnetic fields

Compact, easy to use measuring system, consisting of basic unit, cable and measuring antennas, for isotropic (non-directional) measurement of electro-magnetic fields and their sources in the frequency range from 9 kHz to 6 GHz

- > Code selective EMF measurement of 5G NR signals
- Measurements conforming to ICNIRP and national standards with results displayed directly in terms of the permitted limit value
- > Fast, reliable results using predefined measurement routines, setups, and automatic settings
- Extrapolation to maximum exposure levels and evaluating pilot signal information with LTE - FDD/TDD and UMTS operating modes
- Scope mode for short term analysis of pulsed signals and long term recording of variable exposure levels
- > Editable tables for automatic correlation of results with telecommunications services
- Individual preparation of field campaigns with subsequent evaluation and handling of large quantities of measurement data
- Suitable for outdoor use: Radiation protected, robust, splash-proof, ergonomically designed; uses exchangeable rechargeable batteries; equipped with integrated GPS and voice recorder

The SRM and its applications

The Selective Radiation Meter SRM is a compact, frequency-selective measuring system for safety analysis and environmental measurements of high-frequency electromagnetic fields. It covers broadcasting, mobile telephony, and industrial frequencies from the lowest long-wave range up to the latest wireless applications and evaluates the field exposure level in accordance with international or national standards.

Where the field environment is unknown – in offices, factory buildings, public places, or private homes – the SRM provides authorities and measurement service providers with a rapid overview of the field sources that are relevant to human safety.

Where the field situation is known, such as at so-called "shared sites", where several service providers share a common antenna site, the SRM shows the overall field exposure level as well as the proportions due to each service as an absolute value or as a percentage of the permitted limit value.

Users can resolve services down to individual channel accuracy and measure their contribution to the field emission with the SRM. It is also possible to integrate over the entire frequency range of the service and display the absolute result or the value relative to the permitted limit.

Operation and use

All functions and parameters can be set directly on the SRM basic unit via menus and the numerical keypad, softkeys, or the rotary control. As well as this, the SRM also provides facilities for saving and recalling measurement settings (setups) and entire measurement sequences (routines). The PC software included with the device, "SRM-3006 Tools", includes editable tables for antennas and cables from other manufacturers, user-defined evaluation curves, and lists of services and operators.

Operating modes

The SRM is designed for everyday use and has operating modes tailored to the main areas of application: Safety Evaluation, Spectrum Analysis, Level Recorder, Scope, UMTS, LTE and 5G. Details about these operating modes and other functions are given in the Specifications.

Antennas

Narda offers a broad range of three-axis and single-axis measuring antennas for electric fields (E-fields) and magnetic fields (H-fields).

The three-axis antennas are advantageous in practice because they give isotropic (i.e. non-directional) results automatically.

Definitions and conditions

Conditions

Unless otherwise noted, specifications apply after 30 minutes warmup time within the specified environmental conditions. The product is within the recommended calibration cycle.

Specifications with limits

These describe product performance for the given parameter covered by warranty. Specifications with limits (shown as <, \leq , >, \geq , \pm , max., min.) apply under the given conditions for the product and are tested during production, considering measurement uncertainty.

Specifications without limits

These describe product performance for the given parameter covered by warranty. Specifications without limits represent values with negligible deviations, which are ensured by design (e.g. dimensions or resolution of a setting parameter).

Typical values (typ.)

These characterize product performance for the given parameter that is not covered by warranty. When stated as a range or as a limit (shown as <, \leq , >, \geq , \pm , max., min.), they represent the performance met by approximately 80% of the instruments. Otherwise, they represent the mean value. The measurement uncertainty is not taken into account.

Nominal values (nom.)

These characterize expected product performance for the given parameter that is not covered by warranty. Nominal values are verified during product development but are not tested during production.

Uncertainties

These characterize the dispersion of the values attributed to the measurands with an estimated confidence level of approximately 95%. Uncertainty is stated as the standard uncertainty multiplied by the coverage factor k=2 based on the normal distribution. The evaluation has been carried out in accordance with the rules of the "Guide to the Expression of Uncertainty in Measurement" (GUM).

Specifications - Basic Unit SRM-3006

RF Data ^a						
Frequency	Frequency range	9 kHz to 6 GHz				
	Resolution bandwidth (RBW)	See specifications for ea	ch mode			
	Phase noise (SSB)	< -100 dBc/Hz (@ 300 kHz carrier offset	verified at t) (57.5 / 2140.5 / 45	00.5) MHz		
	Reference frequency	Initial deviation Aging Thermal drift	< 1 ppm < 1 ppm/year, < 5 < 1.5 ppm (-10 °C	ppm over 15 years to +50 °C)		
Amplitude	Display range	From Displayed Average	Noise Level (DANL) to +20 dBm			
	Measurement range (MR)	-30 dBm to +20 dBm in s	teps of 1 dB			
	RF Input attenuation	0 to 50 dB in steps of 1 d	B (coupled with measurement range MR)			
	Measurement range setting	Set individually from a list or using the "MR Search" function for determining the optimum measurement range at a given time				
	Level uncertainty	≤ 1.2 dB (15 °C to 30 °C))			
	Displayed Average Noise Level (DANL)	f ≤ 2 GHz: < f ≤ 4 GHz: <	< -160 dBm/Hz (noise figure < 14 dB) < -156 dBm/Hz (noise figure < 18 dB) < -155 dBm/Hz (noise figure < 19 dB) < -150 dBm/Hz (noise figure < 24 dB)	MR = -30 dBm (RF input attenuation = 0 dB)		
	3 rd order intermodu- lation	< -60 dBc for two single t	tones with a level of 6 dB below MR, spac	ed by 1 MHz or more		
	Spurious responses (input related)	< -60 dBc or MR-60 dB (whichever is worse) and a carrier offset of 1 MHz or more				
	Spurious responses (residual)	< -90 dBm (MR = -30 dBm, RF input attenuation = 0 dB) For (294 to 306) MHz and (4534 to 4586) MHz limited to < -85 dBm				
RF input	Туре	N-Connector, 50 Ω, fema	le			
	Maximum RF power level	+27 dBm (destruction lim	it)			
	Maximum DC voltage	±50 V				
	Return loss		> 12 dB (typ.) > 10 dB (typ.)	MR ≥ -28 dBm (RF input attenuation ≥ 2 dB)		

a RF data apply in the temperature range of 20°C to 26°C and a relative humidity between 25 % and 75 %.

Mode spectrum ar	nalysis

Mode safety evaluation	
Measurement principle	Spectrum analysis, followed by integration over user-defined frequency bands ("services")
Number of services	1 to 500, predefined by service tables on the instrument or created by PC software SRM-3006 Tools
Name of services	User definable, maximum 15 characters set by PC software SRM-3006 Tools
Channel bandwidth of a service (CBW)	Individually selectable for each channel, from 40 Hz to 6 GHz
Resolution bandwidth RBW, (-3 dB nominal)	Available bandwidths as for Spectrum Analysis mode. The following condition applies: RBW ≤ CBW _(narrowest service) / 4 Automatic: RBW setting depending on of the narrowest service Manual: can be set in the range of available RBWs
	Individual: separately defined for each individual service by PC software SRM- 3006 Tools ("Others" needs to be switched off)
Detection	Root mean square value (RMS), integration time = 1 / RBW
Filter	See Spectrum Analysis mode
Result types	See Spectrum Analysis mode
Marker functions for bar graph view	Highest peak, next peak right, next peak left, next higher peak, next lower peak Information provided by Marker: frequency, level, service name according to the selected service table. Delta marker to measure difference in level and frequency of the same trace or to display the difference between two different traces (Result Types) at the same frequency.
Evaluation function	Distribution (percentage contribution of each service)
Axis	X, Y, Z axis selection for single-axis measurements using a Narda Three-Axis Antenna or selection of isotropic measurements
Display functions	Table view showing service names, the corresponding frequency bands, field strength per result type and RBW (when set to individual) Screen arrangement: help line, status lines on/off Sort function according to various criteria
	Bar graph of services showing contribution of the selected Result Types
Noise threshold	Displays results only if they are above the typical noise floor when activated. The threshold is selectable (0, 3, 6, 10, 15, or 20 dB relative to the typical DANL). Measurement values below the threshold are shown as the absolute threshold value marked with "<" (less than threshold)
Others On/Off	Others On: field strength in the frequency gaps between the specified services is measured Others Off: field strength in the frequency gaps between the specified services is ignored
Extras (transfer of parameters)	"Go to: <i>mode</i> " changes the operating mode with automatic parameter transfer for Fcent and Fspan. "Select Service Table" allows switching between predefined service tables

Mode UMTS P-CPICI	H demodulation (option	ı)		
Measurement principle	e	Demodulation of the P-CPICH (Primary Common Pilot Channel) as the basis for automatic assignment of measured field strength values to the individual UMTS radio cells		
UMTS channel selection		By entering the center frequency (Fcent)		
Frequency setting res	olution	100 kHz (for Fcent frequency entry)		
Resolution bandwidth	RBW, (-3 dB nominal)	3.84 MHz (fixed)		
Detection		Root mean square value (RMS), integration time = 10 ms		
Filter	Туре	Root-raised cosine (RRC)		
	Roll-off factor	α = 0.22		
Demodulation algorith	ms	P-CPICH decoding dynamic typically -20 dB according EN50492 / IEC 62232		
Result types		Individually selectable for:

	Manual Start	Time signals displaye	d instant by a button.		
	Time Controlled	Time signals runs inst	ant by date and time.		
Axis		X, Y, Z axis selection for single-axis measurements using a Narda Three-Axis Antenna or selection of isotropic measurements			
Extras (transfer of parameters)		"Go to: <i>mode</i> " changes the operating mode with automatic parameter transfer for Fcent and RBW. "Select Service" allows easy frequency settings by means of predefined service tables			

Measurement function	ons					
Detection of Narda me	asurement antennas	Automatic consideration of antenna parameters after antenna is plugged in: antenna type, serial number, calibration date and antenna factors (see below). Automatic frequency range adjustment according to the connected antenna				
Antenna factors		Used to display measurement results in field strength units Stored in all Narda antennas dur- ing calibration Antenna factor lists for antennas from other manufacturers can be created and transferred to the instrument using the PC software SRM-3006 Tools/TS				
Detection of Narda Ca	bles	Automatic consideration of cable parameters after cable is plugged in: Cable type, serial number, calibration date and loss factors (see below) Automatic frequency range adjustment according to the connected cable				
Cable loss factors		Used for frequency response compensation of the power level display Stored in all Narda cables during calibration Cable loss lists for cables from other manufacturers can be created and transferred to the instrument using the PC software SRM-3006 Tools/TS				
Units		With antenna:% (of the standard), V/m, A/m, W/m², mW/cm², dBV/m, dBmV/m, dBA/m, dBµV/m, dBm, dBV, dBmV, dBµV				
		Without antenna: dBm, dBV, dBmV, dBµV				
Isotropic Measuremen	ts	Automatic switching of the antenna axes when using one of Narda's three-axis measurement antennas followed by computation of the isotropic result. Support for sequential measurements using single-axis antennas with subsequent computa- tion of the isotropic result. Both results are directly displayed as a spectrum curve or as numerical values				
Weighted Display		In % of standard for human safety standards like ICNIRP, IEEE, FCC etc. New lists of exposure limits can be created and transferred to the instrument using the PC software SRM-3006 Tools/TS				
Correlation of results v	vith telecom services	Service Tables specify the used frequency band, the name and the required resolution band- width (RBW) of up to 500 individual services in a single list. Thus measurement results can be easily assigned to a service even without the knowledge of the frequency (marker functions, peak table evaluation function, Safety Evaluation mode).				
		Service Tables can be created either directly on the instrument or conveniently created and transferred to the instrument using the PC software SRM-3006 Tools/TS				
Setups		Complete device configurations provide fast switching between different measurement tasks. Saved setups can be downloaded to a PC for archiving and uploaded back to the instrument using the PC software SRM-3006 Tools/TS				
Measurement Routine	S	Automated sequences of setups (created using the PC software SRM-3006 Tools/TS)				
Results Memory modes Memory		Result stored as: Spectrum in Spectrum Analysis mode (SPECTRUM), Table in Safety Evaluation mode (SAFETY), Values in UMTS P-CPICH Demodulation mode (UMTS) as well as for LTE mode (LTE FDDTDD) and 5G. Values for Level Recorder (LEVEL) and Scope (SCOPE)				
	Conditional Storing	Conditional storing of results exceeding a specified threshold value (in all operating modes except "Scope") with individual storage rates and reset function				
	Time Controlled Storing	Long term monitoring up to 99 hours (in all operating modes except "Scope"). Settings for: start date, start time, duration and time interval (6 s to 60 min)				
	Memory capacity	128 MB (up to 8000 spectra, 4000 screenshots)				
Hold		Button that "Freezes" the display; the measurement continues in the background.				
Operating language		Selectable: English (Default), French, Spanish, Turkish, Simplified Chinese				

General specification	ıs					
Operating temperature	e range		-10 °C to +50 °C during	normal operation with batteries		
			0 °C to +40 °C with exte	ernal power supply		
Compliance	Climatic		Storage	1K3 (IEC 60721-3) extended to -10 °C to +50 °C

- > SRM-3006 basic unit, antenna and RF cable (P/N 3602/01 or 3602/02) included
- > Temperature range: +15 to +30 °C

SRM-3006 with Three-Axis Antenna, 27 MHz to 3 GHz (3501/03)

Frequency response	Minimum detection level	Dynamic range	Linearity	Probe isotropy ^{pq}
27 MHz to 3 GHz: ± 1,5 dB	< 0,01 mW/m ² (i.e. 0,06 V/m) Signal-to-noise ratio of at least 10 dB in the measurement bandwidth	> 60 dB	≤ 1,2 dB	< 700 MHz: < 2 dB 700 MHz to 3 GHz: < 3 dB

SRM-3006 with Three-Axis Antenna, 200 MHz to 6 GHz (3502/02)

Frequency response	Minimum detection level	Dynamic range	Linearity	Probe isotropy ^{rs}	
200 MHz to 6 GHz: ± 1,5 dB	< 0,01 mW/m² (i.e. 0,06 V/m)	> 60 dB	≤ 1,2 dB	< 700 MHz:	< 2 dB
	Signal-to-noise ratio of at least 10 dB in the measurement			700 MHz to 5 GHz:	< 3 dB
	bandwidth			> 5 GHz:	< 5 dB

Measurement uncertainty of SRM-3006 with Three-Axis Antennas

	Expanded uncertainty (k = 2)		
Frequency range	Antenna 3501/03	Antenna 3502/02	
< 800 MHz	2.64 dB	2.13 dB	
800 MHz to 3 GHz	2.31 dB	2.06 dB	
> 3 GHz to 6 GHz	NA	1.89 dB	

The specified uncertainties in the table "Measurement uncertainty of SRM-3006 with Three-Axis Antennas" above are evaluated under the following additional condition:

Frequency Response and Linearity included

Isotropic Response of SRM-3006 with Three-Axis Antennas

	Isotropic response ^t		
Frequency range	Antenna 3501/03 Antenna 3502/02		
< 800 MHz	0.5 dB	0.75 dB	
800 MHz to 3 GHz	2.2 dB	1.0 dB	
> 3 GHz to 6 GHz	NA	2.35 dB	

See p t

The antenna is rotated about its ortho-axis for each frequency. The isotropic response is calculated from the maximum and minimum indication after a full revolution of 360° has been made ...

Probes and measurement antennas with isotropic response are recommended. Single-axis (e.g. dipole) and directional measurement antennas are permitted а provided that the measurements are post processed to obtain the total field strength (equivalent to a measurement with an isotropic probe / measurement antenna).

Ordering information The Selective Radiation Meter, Basic Unit, is included in the Basic Sets. Software Options and Accessories that provide additional capabilities are also available.

Your local Narda sales representative can provide information about all the possible options as well as the current ordering information and will be pleased to offer advice.

Basic Unit Sets

SRM-3006, Selective Radiation Meter, Set 2	Part number
 Basic Unit without Antenna Includes: Selective Radiation Meter, Basic Unit, SRM-3006 RF-Cable SRM, 9 kHz – 6 GHz, N 50 Ohm, 1.5 m (3602/01) Carrying Strap for SRM (Basic Unit) (3001/90.02) Holding Strap for SRM-3006 Basic Unit (3001/90.12) Operating Manual SRM-3006, English (3006/98.21) Power Supply 12 VDC, 100 V – 240 VAC, all Plugs (2259/92.04) Cable, USB 2.0, Master/Slave - A/B mini (2260/90.55) Reference Book Measuring RF Electromagnetic Fields (3006/98.25) Safety Instructions (3300/98.10) SRM Hardcase Trolley (3006/90.01) Calibration Certificates: Basic Unit, RF-Cable 	With Trolley Hardcase 3006/202
SRM-3006, Selective Radiation Meter, Set 8	Part number
 Basic Unit plus one Isotropic Antenna (27 MHz – 3 GHz) Includes: Selective Radiation Meter, Basic Unit, SRM-3006 Antenna, Three-Axis, E-Field, 27 MHz – 3 GHz (3501/03) RF-Cable SRM, 9 kHz – 6 GHz, N 50 Ohm, 1.5 m (3602/01) Carrying Strap for SRM (Basic Unit) (3001/90.02) Holding Strap for SRM-3006 Basic Unit (3001/90.12) Operating Manual SRM-3006, English (3006/98.21) Power Supply 12 VDC, 100 V – 240 VAC, all Plugs (2259/92.04) Cable, USB 2.0, Master/Slave - A/B mini (2260/90.55) Reference Book Measuring RF Electromagnetic Fields (3006/98.25) Safety Instructions (3300/98.10) SRM Hardcase Trolley (3006/90.01) Calibration Certificates: Basic Unit, RF-Cable, Antenna 	With Trolley Hardcase 3006/208

SRM-3006, Selective Radiation Meter, Set 9	Part number
 Basic Unit plus one Isotropic Antenna (200 MHz – 6 GHz) Includes: Selective Radiation Meter, Basic Unit, SRM-3006 Antenna, Three-Axis, E-Field, 200 MHz – 6 GHz (3502/02) RF-Cable SRM, 9 kHz – 6 GHz, N 50 Ohm, 1.5m (3602/01) Carrying Strap for SRM (Basic Unit) (3001/90.02) Holding Strap for SRM-3006 Basic Unit (3001/90.12) Operating Manual SRM-3006, English (3006/98.21) Power Supply 12 VDC, 100 V – 240 VAC, all Plugs (2259/92.04) Cable, USB 2.0, Master/Slave - A/B mini (2260/90.55) Reference Book Measuring RF Electromagnetic Fields (3006/98.25) Safety Instructions (3300/98.10) SRM Hardcase Trolley (3006/90.01) Calibration Certificates: Basic Unit, RF-Cable, Antenna 	With Trolley Hardcase 3006/209
SRM-3006, Selective Radiation Meter, Set 10	Part number
 Basic Unit plus two Isotropic Antennas (9 kHz – 6 GHz) Includes: Selective Radiation Meter, Basic Unit, SRM-3006 Antenna, Three-Axis, E-Field, 200 MHz – 6 GHz (3502/02) Antenna, Three-Axis, H-Field, 9 kHz – 250 MHz (3581/02) RF-Cable SRM, 9 kHz – 6 GHz, N 50 Ohm, 1.5 m (3602/01) Carrying Strap for SRM (Basic Unit) (3001/90.02) Holding Strap for SRM-3006 Basic Unit (3001/90.12) Operating Manual SRM-3006, English (3006/98.21) Power Supply 12 VDC, 100 V – 240 VAC, all Plugs (2259/92.04) Cable, USB 2.0, Master/Slave - A/B mini (2260/90.55) Reference Book Measuring RF Electromagnetic Fields (3006/98.25) Safety Instructions (3300/98.10) SRM Hardcase Trolley (3006/90.01) Calibration Certificates: Basic Unit, RF-Cable, Antennas 	With Trolley Hardcase 3006/210

Software Options

Description	Part number
Option, UMTS P-CPICH Demodulation	3701/04
Option, Scope	3701/05
Option, LTE (for FDD networks)	3701/06
Option, LTE (for TDD networks)	3701/07
Option, 5G NR	3701/08
Software, SRM-3006 Tools, Configuration SW	-
(available for free at www.narda-sts.com under Downloads)	
Software, SRM-3006 TS, PC Evaluation and Remote	3006/93.10

Accessories

Accessory description	Part number
Antenna Holder for Uniaxial/Triaxial Antenna	3501/90.01
Antenna Holder for Triaxial Antenna	3501/90.02
RF-Cable, 9kHz-6GHz, 1.5m, N 50 Ohm (included in all sets)	3602/01
RF-Cable, 9kHz-6GHz, 5m, N 50 Ohm	3602/02
Tripod, Non-Conductive, 1.65 m with carrying bag	2244/90.31
Tripod Extension, 0.50m, Non-Conductive	2244/90.45
Battery Pack, Rechargeable, 7V2 / 6200 mAh (one is included in each SRM Basic Unit)	3001/90.15
Charger Set for Battery Pack, External	3001/90.07
Power Supply DC Vehicle Adapter	2260/90.56
SRM Hardcase Trolley (for up to three antennas), replaces 3001/90.05 and 3001/90.03	3006/90.01
Protective Soft Carrying Bag for SRM-3006 Basic Unit	3001/90.13
N-Connector Saver for SRM	3001/90.14
O/E Converter USB, RP-02/USB	2260/90.07
Cable, FO Duplex, F-SMA to RP-02, 0.3m	2260/91.01
Cable, FO Duplex, RP-02, 2m	2260/91.02
Cable, FO Duplex, RP-02, 5m	2260/91.09
Cable, FO Duplex, RP-02, 10m	2260/91.07
Cable, FO Duplex, RP-02, 20m	2260/91.03
Cable, FO Duplex, RP-02, 50m	2260/91.04
Earphone, 3.5mm Plug	2400/90.03
Reference Book Measuring RF Electromagnetic Fields (included in all sets)	3006/98.25
Operating Manual SRM-3006, German (select for free instead of English)	3006/98.01
Antennas	Part number
Antenna, Three-Axis, E-Field, 27 MHz – 3 GHz	3501/03
Antenna, Three-Axis, E-Field, 200 MHz – 6 GHz	3502/02
Antenna, Three-Axis, H-Field, 9 kHz – 250 MHz	3581/02
Antenna, Single-Axis, E-Field, 27 MHz – 3 GHz	3531/01
Antenna, Single-Axis, E-Field, 9 kHz – 300 MHz	3531/04
Antenna, Single-Axis, H-Field, 9 kHz – 300 MHz	3551/02
Antenna, Set 5G FR2 Antenna, directional, 24.25 to 29.5 GHz.	3591/101
See separate datasheet at narda-sts.com for more info	
Antenna, Set 5G FR2 Antenna, omnidir., 24.25 to 29.5 GHz.	3591/102
See separate datasheet at narda-sts.com for more info	
Antenna, Set 5G FR2 Antenna, dir. + omni., 24.25 to 29.5 GHz.	3591/103
See separate datasheet at narda-sts.com for more info
